Hi Matt & Sana,

I need to correct my earlier email, sorry for any confusion. I forgot to mention that I paused the Calendly steps last week before finishing. The Tracking ID question has been removed from the Discovery Call form and the webhook hasn't been registered, so there's nothing on our side for you to connect to just yet.

The reason I paused is that, while our tech specialist and I were working through it, I realised it overlaps with something we've been building this week (the dashboard). I'd love to suggest it as an option that keeps everything connected in one place.

What we've set up

- Since working with our tech specialist, a script on our website captures where each visitor came from: UTM source, medium and campaign, the Google or Microsoft click ID, the landing page, and both their first and most recent visit.
- When someone books through Calendly, those UTM details travel with the booking, and an automation updates the contact in ActiveCampaign with their source. Done Digital is connecting the website enquiry forms the same way, and we're aiming for this week.
- Our own links (emails, socials, partner packs) now use consistent UTMs too.

Our suggestion
Rather than adding a separate Tracking ID question and webhook, we'd love to explore using this UTM setup as the shared source of truth. That way the ads, website, Calendly and ActiveCampaign all stay connected, rather than each holding its own piece of the picture. It also keeps the booking form simple for prospects.

If there's something the webhook gives you that this wouldn't, please let me know. I'm very happy to work out a way to get you what you need within the same setup.

Giving Google Ads credit for slower decisions
As shared regarding cross-channels. Our buyers often take their time. Someone might click a Google ad, look around the website, check James's profile or LinkedIn, leave, and then come back a few weeks later (sometimes through a different channel) to make an enquiry. We'd like those enquiries to still be credited to the original ad click.

On our side, the website script now remembers a visitor's first and latest source for **90 days**, and the first source is kept on their ActiveCampaign contact once they enquire. To keep everything consistent, could you look at:

- setting the **click-through conversion window to 90 days** on the enquiry conversion actions in Google Ads (and the Microsoft equivalent), and
- setting the **GA4 attribution lookback window to 90 days**?

That way Google Ads, GA4 and our CRM would all be looking at the same 90-day journey. I'd also love your view on whether 90 days suits our sales cycle, or if you'd recommend something different.

A couple of small heads-ups

- **Google Ads:** we'd like to add an account-level Final URL suffix so each click carries its campaign details: `google-ads&utm_source=google&utm_medium=cpc&utm_campaign={campaignid}&utm_content={adgroupid}&utm_term={keyword}`. Auto-tagging stays on, and nothing changes with bidding or targeting. Please let me know if you see any reason not to go ahead.
- **Microsoft Ads:** no changes needed, as auto-tagging is already on.

Thanks so much for your patience and help, Matt. Really looking forward to getting this working together.

Warmly,
Cloverly

Hi Cloverly,

Would you be able to complete these steps for us?

James showed us the dashboard you have set up and despite some level of overlap we agreed that it is better to have the two tools rather than one.

If you could prioritise this it would be appreciated.

Thanks in advance.

Hi Matt,

Happy to prioritise this. Here's where we're at:

Done today
- "Tracking ID" (short answer) is back on the Discovery Call with Cas form as the first custom question. I've checked it on the live booking page.
- The Personal Access Token is ready on our side.

To register the webhook I just need two things from you:

1. Your Project ID for the webhook URL. Your instructions use https://www.google.com/url?q=https://app.marketingiq.com.au/api/webhooks/calendly/&source=gmail&ust=1791858751211000&sa=E<PROJECT_ID> as a placeholder, so I need the real value.

2. Confirmation on the signing key. As far as I can see, Calendly's API doesn't send a signing_key back unless we include

one in the request. Unless you'd prefer to supply your own, I'll generate a random key, include it when I register the webhook, and send it to you privately (not by email).

Also a quick check: with "scope": "user", every new booking on any of James's event types is sent to MarketingIQ, not only Discovery Calls. That's fine as long as your tool filters to the Discovery Call event type. Please let me know if that's the plan.

Once I have the Project ID I'll register it the same day and confirm.

Warmly,
Cloverly

Hi Matt,

One more question on the Tracking ID field.

Calendly can't hide custom questions, so prospects can now see "Tracking ID" on the booking form. It's optional, so nobody is blocked from booking, but it may confuse people who don't know what to put there.

I'm assuming your script fills it in automatically through the a1 URL parameter on our website links and embeds. Is that right? If so:

1. Which pages or links will carry it? Bookings made through direct https://www.google.com/url?q=http://calendly.com&source=gmail&ust=1791859862725000&sa=E links (emails, LinkedIn, James' signature) would arrive with the field blank. Is that okay on your end?

2. Would your tool still work if we renamed the label to something friendlier, like "Reference code (optional, leave blank if unsure)"? Or does it need the exact label "Tracking ID"?

Thanks!

Warmly,
Cloverly

Hi Matt & Sana,

Following up on my previous emails regarding the Calendly tracking setup.

Could you please provide an update on the Project ID and clarification on the Tracking ID field? Once I have these details, I can go ahead and finalize the setup and make the necessary updates on our end.

Thanks!

Warmly,
Cloverly

Cc: Sana Fathima <sana@simpledigital.net.au>, james@myadventuregroup.com.au, julienne@myadventuregroup.com.au

Hi Cloverly,

Thanks for the detailed questions, and for getting the Tracking ID question set up.

Project ID: cmu6g36zq0000ssi8f4ybnw52, which makes the webhook URL:
https://app.marketingiq.com.au/api/webhooks/calendly/cmu6g36zq0000ssi8f4ybnw52

Signing key: let's go with your plan. Please generate a random key, include it when you register the webhook, and send it to me securely (e.g. password-manager share) rather than email. I'll configure it on our side first and confirm before you register, so everything is verified from the first booking.

Event types: you're right that "user" scope sends every event type. Our side will keep only Discovery Call bookings and discard the rest without storing them.

Tracking ID: our website script fills it in automatically through the Calendly embed on the Free Consult page. It can also fill in any other Calendly buttons or links on the site. Could you list every page where Calendly appears, and any other event types you'd like tracked?

Direct links: a blank field is fine for bookings from emails, LinkedIn or James' signature. It tells us the booking didn't come through the website. If you'd like those attributed too, tag each link, e.g. …/discovery-call-with-cas?utm_source=linkedin&utm_medium=social, and Calendly will pass that through to us.
Renaming: that works. I'd suggest "Reference code (auto-filled – please leave as is)", since on website bookings the code will already be filled in and deleting it would lose the attribution. Please keep it as the first question.

Thanks again,

Hi Matt,

Thanks so much for this. Really clear, and it all works for us.

A quick correction from my side: I'd removed the question while we were working through the details, so I'll re-add it today using your suggested label, "Reference code (auto-filled – please leave as is)", as the first question. I'll set it as optional so it can never block a booking.

Pages with Calendly: the Discovery Call appears on:

- /free-consult/
- /call/
- /increase-your-50-chance-of-success/
- /increase-your-75-chance-of-success/
- /increase-your-90-chance-of-success/
- /free-gift-delivery-page-leaders/

One note on that last page: it's our keynote free-gift page, so bookings from it come from keynote audiences rather than ads.

Event types: just the Discovery Call, please. The other event types on the site (debrief, appointment and conference design calls) are for existing or booked clients.

Direct links: great idea. We'll tag our Calendly links in emails, LinkedIn and James's signature with UTMs.

Signing key: I've shared the Calendly webhook signing key with you securely. Click here: https://console.cloud.google.com/security/secret-manager/secret/CALENDLY_WEBHOOK_SIGNING_KEY/versions?project=claudegwscli-502400

Could you let me know once it's configured on your side? I'll register the webhook as soon as you confirm.

Thanks again for your help!

Hi Cloverly,

Thanks for sending the key over. When I open the Secret Manager link it says I don't have access to that secret. Rather than adding me to your project, could you send the key another way? Either of these works:

A one-time-view link (for example Lastpass, 1Password etc.) sent by email. If that is not an option via SMS (0432199742)

If you'd prefer to keep it in Secret Manager, you can grant matt@simpledigital.net.au the Secret Manager Secret Accessor role on that one secret only. The Viewer role doesn't show the value.

As soon as I have the key I'll set it up and confirm, and then you can register the webhook.

Thanks,

Hi Matt,

I updated your GSM secret role to Secret Manager Secret Accessor. In case that does not work, I also sent you the key thru lastPass.

Thanks,

Matt Isaac <matt@simpledigital.net.au> Tue, Oct 27, 2026 at 8:20 AM
To: Cloverly Yadao <cloverly@myadventuregroup.com.au>
Cc: Sana Fathima <sana@simpledigital.net.au>, james@myadventuregroup.com.au, julienne@myadventuregroup.com.au

Hi Cloverly,

Thanks for all of that, it's really helpful.

The signing key is configured on our side, so you're clear to register the webhook now. Please use the URL below and the same key you shared with us.
https://app.marketingiq.com.au/api/webhooks/calendly/cmu6g36zq0000ssi8f4ybnw52

We've also set it to keep only Discovery Call bookings. The debrief, appointment and conference design calls will be ignored and not stored.

Once you've registered it, could you make one test booking on the Discovery Call and let me know roughly when? I'll

check it arrives and is attributed correctly before we call it done.

A note on the keynote free-gift page: since those bookings come from keynote audiences rather than ads, they'll appear in our reporting as non-advertising bookings.

Thanks again,
--
